Work Experience

Software Engineer (Backend) *On-site, Gurgaon, Haryana*
Salescode.ai June 2025 – September 2026

- Built and maintained **Java Spring Boot** microservices and **REST APIs** for **ITC Unnati**, a B2B eCommerce platform serving 2.5M retailers/outlets; delivered 3–4 complex CRs and 25–30 smaller CRs involving backend features, bug fixes and business-logic enhancements within a 6-member Agile team.
- Designed and built the **end-to-end outlet onboarding flow** (registration, supplier mapping, client approval/rejection) using Spring Boot, **Kafka**, and **NiFi**, onboarding 100K outlets.
- Cut API and report latency from 5–6 seconds to under 300 ms by adding **Redis caching**, tuning **MySQL** queries, and removing data-processing bottlenecks in integration flows.
- Engineered event-driven data pipelines with **Apache NiFi**, **Kafka**, and REST APIs feeding downstream **Flink** processing, implementing validation, enrichment, and transformation across MySQL/MSSQL for 4–5 crore records/day.
- Built an end-to-end **historical sales data integration**: **NiFi** stages daily CSVs to **AWS S3**, a job loads them into **Amazon Redshift**, and **DynamoDB** tracks processed files so daily Kafka/CSV runs never reprocess data.
- Built **MDM workflows** for Excel-based ingestion, templates, cards, validation, enrichment and transformation, and built 8+ **Jasper Reports** using SQL and custom Java logic.
- Built NiFi monitoring flows that trigger **Slack/email alerts** and update DB flags, and resolved production incidents using **CloudWatch**, Kafka, and SQL analysis; used existing **Jenkins CI/CD** jobs for service deployments and restarts.
- Integrated sales-rep features into the **Unnati PWA**, including login flow, data management, and outlet contest enrollment.

Technical Skills

Languages: Java, SQL, Python, JavaScript, C++
Backend: Spring Boot, REST APIs, Microservices, Node.js/Express, Flask
Messaging & Integration: Apache Kafka, Apache NiFi, Redis (caching), Jolt
Databases: MySQL, MSSQL, MongoDB, DynamoDB, Amazon Redshift
Cloud: AWS (S3, DynamoDB, Redshift, CloudWatch)
Tools: Git, Jenkins (CI/CD), Jasper Reports, Linux
Fundamentals: Data Structures & Algorithms, OOP, Database Design, Agile
Also: TensorFlow, Keras

Projects

PCOS Detection Tool | *Python, TensorFlow, Flask, MobileNet, Grad-CAM* GitHub | Demo | IC3 2025 Paper

- Fine-tuned **MobileNet** to classify PCOS from ultrasound images, reaching 75% accuracy on a 20,000-image held-out test set; published at **IC3 2025**.
- Added **Grad-CAM** heatmaps to highlight the regions driving each prediction, served through a Flask app with real-time image upload.
- Generated 100+ synthetic patient records with **CTGAN** and stored them in a custom **SHA-256** blockchain ledger backed by MongoDB (GitHub).

CampEase | *Node.js, Express, MongoDB, EJS* GitHub | Demo

- Built a full-stack campground booking platform with **user authentication**, campground CRUD, reviews, and search/filter functionality.
- Enforced **authorization checks** so only owners can edit or delete their listings.

Education

Jaypee Institute of Information Technology, Noida *2022 – 2026*
B.Tech in Computer Science and Engineering CGPA: 8.0/10

City Montessori School, Lucknow *2022*
ISC (Class XII) 96.5%

Achievements

- Paper on **PCOS Detection Tool** accepted at **IC3 2025** (top 12% of 481+ submissions).
- **Top 10 of 50+ teams** at JIIT Ride-Hack 2024 (*Metropolis Assist*).
- Solved **800**+ problems on LeetCode, HackerRank, and GFG; LeetCode rating 1,609.
